PROJECT

SYNOPSIS

OF

COLLEGE COMPLAINT & ISSUE REPORTING SYSTEM

Project Name

College Complaint & Issue Reporting System

Submitted to: _____

Submitted by: _____

(Complete team member names)

(College / Department)

OBJECTIVE

The objectives of the system are-

- ■ To reduce paperwork involved in complaint registration and management.
- ■ To reduce the time required to report and resolve college-related issues.
- ■ To provide accurate and reliable complaint records.
- ■ To increase the operational efficiency of the college administration.
- ■ To provide secure storage and management of complaint data.

This software package can be readily used by non-programming personnel to manage complaints and issues while reducing the chances of human error. The project is mainly used by two types of users:

i. Students.

ii. Administrator / College Authority.

Students can create their accounts, submit complaints or issues, provide necessary details, and track the status of their complaints. The administrator can view complaints, update their status, manage records, and generate reports according to requirements.

The application can be upgraded according to the requirements of users and administrators with little modification. New features can also be added as required.

MODIFICATION AND IMPROVEMENT OVER THE EXISTING IMPLEMENTATION

Present State of Project:

- Complaints and college issues may be reported manually.
- Students may need to visit the concerned department to report an issue.
- Maintaining complaint records manually can consume considerable time.
- Tracking the current status of a complaint can be difficult.
- Preparation of complaint-related reports may require manual work.
- There may be delays in communicating updates to students.

After implementation of project:

- Easy-to-use web-based interface.
- Students can register and submit complaints online.
- Students can track the status of their complaints through the system.
- Administrators can view and manage complaints from a centralized dashboard.
- Complaint status can be updated as Pending, In Progress, or Resolved.
- Complaint records can be searched and filtered easily.
- The workload involved in manually maintaining complaint records is reduced.

SCOPE OF PROJECT

This project has a large scope as it provides features that make the complaint management process easier to use, understand and modify:

- Automation of the complaint registration procedure.
- Reduction of paperwork.
- Centralized management of student complaints and issue records.
- Improvement in the accuracy and efficiency of complaint handling.
- Easy tracking of complaint status.

This software package can be readily used by non-programming personnel for managing complaint records. The software is used by two types of users:

i. Students.

ii. Administrator / College Authority.

Main Points are:-

- Simplified management of student complaints.
- Online complaint submission.
- Complaint categorization and status management.
- Complaint history and tracking.
- Administrative dashboard.
- Search and filtering of complaints.
- Real-time information publishing through system alerts.

SIGNIFICANCE OF PROJECT

The significance of the project is to provide the following benefits:

- The project helps automate the complaint and issue reporting process of the institute.
- Students do not need to depend entirely on manual complaint submission.
- Students can track the progress of their submitted complaints.
- The administration can maintain complaint records in a centralized database.
- Complaint information can be searched and retrieved easily.
- The system can help reduce the time and effort required for complaint management.
- Reports and complaint information can be maintained according to the requirements of the administration.

TOOLS AND TECHNOLOGY USED

Tools:

■ Visual Studio Code: A lightweight source-code editor used for developing the application.

■ MySQL: A relational database management system used to store student, administrator and complaint information.

■ MySQL Workbench: A graphical tool that can be used to design, manage and query the MySQL database.

Technology:

■ Python: A high-level programming language used for developing the backend of the system.

■ Flask: A lightweight Python web framework used to develop the web application and handle server-side requests.

■ SQLAlchemy: A Python SQL toolkit and Object Relational Mapper used to interact with the database.

■ HTML: Used to create the structure of the web pages and provide the user interface.

■ CSS: Used to design and style the web pages.

■ Bootstrap: Used to create a responsive and user-friendly interface.

■ JavaScript: Used for client-side validation and interactive functions on the website.
